LLM Engineering

Languages

Persian (Native or Bilingual)

French (Full Professional)

English (Full Professional)

Certifications

AI Coder: Complete Claude Code & Coding Agents Course

LLM Engineering: Master AI, Large Language Models & Agents

AI Builder: Create Agents, Voice Agents & Automations in n8n

AI Engineer Production Track: Deploy LLMs & Agents at Scale

AI Leader: Generative AI & Agentic AI for Leaders & Founders

Honors-Awards

Recipient of Grant and Membership for Outstanding Academic Success

Gole medalist in National Olympiad in Informatics

Behrad Zabihi

Data Scientist | MSc Data Science
Manchester Area, United Kingdom

Summary

I'm a Data Scientist with a strong grounding in statistics, machine learning, NLP and software engineering. My strength is taking an idea from problem definition to a working production system: understanding the business need, shaping the data, building the model or AI workflow, testing it properly, deploying it to the cloud, and monitoring it so it remains reliable over time. I'm especially interested in the next layer of AI systems: agentic workflows and multi-agent systems that can reason through tasks, use tools, coordinate steps and reduce manual work. I care about making these systems practical, measurable and robust enough to sit inside real business processes. I'm not a "Jupyter notebook only" data scientist. I enjoy the modelling side, but I'm just as focused on the engineering around it: reliability, deployment, monitoring, maintainability and whether the final system genuinely helps the people using it. I hold an MSc in Data Science and Statistics from Lancaster University, graduating with Distinction in the top 2.5%, and a BSc in Computer Engineering from Sharif University of Technology. Eligible to work in the UK without sponsorship.

Experience

bet365

Data Scientist

February 2026 - Present (6 months)

Manchester

- Engineered 50+ ML-ready player profiling features across gaming preferences and behavioural patterns on 1M+ UK players in SQL Server and Python.
- Productionised an end-to-end pipeline on GCP: moving on-prem SQL Server data into GCP, daily BigQuery incremental recompute, and Vertex AI Feature Store serving at 10ms latency to feed into downstream ML models.

Informed Solutions

Data Scientist

November 2023 - November 2025 (2 years 1 month)

Greater Manchester, England, United Kingdom

- Automated Scottish farmers' funding validation with a multimodal ML pipeline deployed on AWS (Llama, LLaVA, Bedrock, Textract), cutting review time from 2 weeks to real-time and achieving an F1 score of 0.91.
- Built a scalable ETL pipeline using Airbyte and DBT to extract and link EPC and postcode data for 65,000 households in the Isle of Wight, powering an interactive map for household-level EPC insights.
- Developed cloud-native web apps and REST APIs to support scalable, data-driven public services.
- Built a Power BI dashboard enabling real-time data-driven decisions for delivery managers and recruiters.
- Communicated complex AI/ML concepts to both technical and non-technical stakeholders.
- Managed CI/CD pipelines and automated testing using Git and Jira in agile cross-functional teams.

Informed Solutions

Data Scientist

June 2023 - September 2023 (4 months)

Manchester, England, United Kingdom

- Developed an NLP pipeline for keyword extraction and summarisation of structured and unstructured data.
- Improved topic extraction using BERTopic and LLM-based techniques.
- Used GPT and LangChain to summarise urban planning cases, cutting manual review time by 60% and reaching a BERTScore F1 of 0.84.

Mizan Gostaran Sharif

Data Scientist

June 2022 - August 2022 (3 months)

Tehran, Iran

- Scaled resume parsing system from 26K to 500K+ CVs using a custom NLP pipeline for entity extraction.
- Improved job recommendation by clustering unstructured CVs using UMAP + HDBSCAN for semantic similarity analysis.

Sharif University of Technology

Research Assistant

February 2021 - July 2021 (6 months)

Tehran Province, Iran

- Modelled Covid-19 propagation network using time series and statistical modelling on 100k global cases.
- Identified key influencers in the global propagation graph by inferring inter-country transmission rates.

Education

Lancaster University

Master of Science, Data Science and Statistics · (October 2022 - September 2023)

Sharif University of Technology

Bachelor of Science, Computer Engineering · (September 2016 - July 2021)
